

In the Specification:

Please amend the paragraph beginning on page 4, line 20 with the following rewritten paragraph:

Accordingly, as illustrated in FIG. 3, the preferred embodiment of the instant invention contemplates an improved control system for the tool 10 that includes a light touch switch 30 disposed on a portion of the nose portion 12. In this embodiment, the light touch switch 30 is disposed such that during the ordinary course of operation, the operator may actuate the light touch switch without any significant regripping of the tool 10. As is best seen in the embodiment illustrated in FIG. 2, the operator may conveniently grip the nose portion 12 of the tool ~~12-10~~ much like one would grip a pencil, with the nose portion being gripped between the thumb and the first two fingers and with the center portion 16 resting in the base of the thumb and first finger. In this position, the first finger is located very close to the switch 30 so that it may be actuated without any substantial regripping of the tool.
